

## **Impact Study**

Selvi.Nandhini is female child and first of four children (two girls and two boys) in the house who is doing her fourth standard. Her father's name is Mr.Rajkumar who passed away due to HIV/AIDS before four years. Since then her mother Mrs.R.Kaweri shoulders the responsibility of the entire family. Her mother is also living with HIV/AIDS. She is unable to go for any kind of work as her health condition is very poor and she is consuming ART also. She is also one among many who referred by us to the Welfare Department to avail the Old Age Pension of Rs.400/- and four kg. of rice. Nandhini is also an infected child of HIV/AIDS and consumes ART. Before the Induction of Nandhini into the FCP program she discontinued from the school and went for working in fruits godown. She has to carryout the fruit bags while loading and unloading from lorries. For this kind of work she used to get Rs.20/-at the end of the work. Only this was the source with which they ought to manage the entire family and her family was living in a rented hut for some time, then because of the inability to pay the rent they were asked to leave away the hut by the owner and made use of the platform in the bus-stand as their inhabitant for sleeping. They went starving for many days or managing with little whatever they get from the people in the bus-stand. It was this juncture our staff members found this family and inducted into the FCP project through which her mother was referred for ART & OAP as mentioned above. Now this family is living at a village called Vankarasalai Medu in Veesanam Panchayat. They had just made a tent which appears without door and walls for protection. So there is no guarantee for the things kept in the house. They have just only one pot, two cooking vessels, two plates & glasses and two ladles as their utensils. Indeed their living condition is in utter poverty and pathetic which eventually needs adequate care & support. Nandhini is given educational, nutritional and economical support for her holistic development. But for our FCP assistance she would not go to school and her family would not be living here. She is being helped directly and her family is benefiting indirectly through this project. She looks neat and tidy by taking both, applying hair-oil and powder, brushing etc. She appears nice as she was given pairs of colour dresses and pairs of uniform dresses. She spends atleast two hours daily for study and is slowly improving in studies. This family was referred to Self Help Group from where they get benefit from handful of rice and Hundial collection. For any emergency situation they are being helped by the SHG in the village. Thus Nandhini's life along with her entire family is being benefited from this project. Now she has many friends and her mother also participates in the FCP programme regularly every month. Thus this project effects them positively for sustainability of their life. Nandhini also had the privilege of meeting Mr.Loek on 01.02.08 at her own house along with her month.

## **B3. Analysis :**
